

QUALITY STANDARDS

Institute of Construction and Urban Economic Research

1. Statement and Purpose

Quality Statement: At the Institute of Construction and Urban Economic Research, we are committed to delivering technology products and services of the highest quality, exceeding customer expectations. We believe quality is not just a goal but the foundation of all business activities, from design and production to after-sales services.

Purpose of the Document: This document establishes the core standards, principles, and processes for quality management, serving as a guideline for all employees and partners of the company. The handbook aims to:

- Ensure consistency and compliance with quality processes across the company.
 - Provide a clear framework for measuring, evaluating, and improving product/service quality.
 - Promote a quality culture where every individual is responsible and contributes to shared goals.
-

2. Quality Management Principles

Our quality management system is built on the following core principles:

- **Customer Focus:** Listen and understand customer needs to deliver the most suitable technology solutions.
- **Leadership:** The company's leadership is committed to championing a quality culture, creating an environment where everyone can maximize their potential.
- **Employee Engagement:** Every employee is a vital link in the quality value chain. We encourage proactivity, creativity, and responsibility.
- **Process Approach:** All activities are viewed as processes with clear inputs, outputs, and checkpoints to ensure efficiency.
- **Continuous Improvement:** Quality is not a final destination. We continuously seek opportunities to improve products, processes, and services.

3. Detailed Quality Management Processes

3.1. Product Design and Development

The product design and development process must strictly follow these steps:

- Requirement Analysis:** Collect and analyze detailed customer and market requirements.
- Design:** Create an initial design, including architecture, features, and interface.
- Design Testing:** Conduct internal tests to identify errors or weaknesses.
- Prototype Evaluation:** Develop a prototype and perform comprehensive tests for functionality, performance, and reliability.
- Approval and Launch:** Once all tests meet standards, the product is approved and officially launched.

3.2. Supplier Management

We maintain a network of reputable and reliable suppliers. Suppliers must adhere to our quality standards.

Supplier Management Process:

- Evaluate and select suppliers based on capability, product quality, and pricing.
- Conduct periodic inspections to ensure quality standards are maintained.
- Provide feedback and work closely with suppliers to address quality issues.

4. Quality Control and Assurance

4.1. Inspection and Testing Activities

STAGE	INSPECTION OBJECTIVE	INSPECTION METHOD
INPUT	Raw materials, components	Visual inspection, sample testing
PROCESS	Steps in production/implementation	Direct monitoring, random checkpoint inspections
OUTPUT	Final product/service	Functional, performance, and durability testing

4.2. Corrective and Preventive Actions (CAPA)

- **Corrective Action:** Actions taken to eliminate the cause of an existing nonconformity.
- **Preventive Action:** Actions taken to eliminate the cause of a potential nonconformity.

Whenever a quality issue is identified, the relevant department must follow the CAPA process:

1. Identify the issue.
 2. Analyze the root cause.
 3. Propose and implement corrective/preventive actions.
 4. Monitor the effectiveness of the implemented actions.
-

5. Quality Measurement and Reporting

We use key performance indicators (KPIs) to track and measure product/service quality:

- **Defect Rate:** Number of defective products relative to total products.
- **Customer Satisfaction Score (CSAT):** Measured through customer surveys.
- **Customer Response Time:** Time from receiving a request to providing a response.
- **Process Efficiency:** Time taken to complete a production/implementation process.

These metrics are compiled and presented in periodic reports (weekly, monthly, quarterly) for the Board of Directors and relevant departments to monitor and make decisions.

6. Rights and Responsibilities

- **Board of Directors:** Ultimately responsible for establishing and maintaining the quality management system.
 - **Quality Management Department:** Responsible for conducting quality control and assurance activities, training, and internal evaluations.
 - **Department Heads:** Ensure quality standards are applied within their departments and report any issues.
 - **All Employees:** Responsible for adhering to processes, reporting quality issues, and contributing improvement ideas.
-

7. Commitment to Compliance

I commit to adhering to the quality standards of the Institute of Construction and Urban Economic Research, contributing to the shared goal of delivering the best products and services to customers.
